Skills

Languages:	HTML, CSS, JavaScript, Python, Java, C, C++, C#, Typescript
Frameworks:	Node, React, Angular, Spring Boot, Flask, Bootstrap, Unity, JATOS, Pytest, Jtest Next.js
Tools:	Git, CI/CD, Figma, Penpot, Visual Studio, Docker, Selenium, JaCoCo
Databases:	PostgreSQL, MongoDB, SQL, NoSQL
Platforms:	Windows, Linux, Ubuntu

Education

Rochester Institute of Technology (RIT)

Aug. 2023 - May 2028

- **Major:** Software Engineering B.S | *Minor: Game Design & Development*
- **GPA:** 3.25 / 4.0 | *Dean's List Fall & Spring 2023-2024, RIT Presidential Scholarship, Certified W3Schools JavaScript Developer*
- **Relevant Courses:** Engineering of Enterprise SW Systems, Design for Embedded Systems, Analysis of Algorithms, Web Engineering, SW Subsystems & Design, SW Process & Management, Human Centered Req. & Design, Intro to SWE

Experience

NGAFID Flight Data Management Research & Development Student - Rochester Institute of Technology

May. 2026 – Current

*An open-source **Java** flight data management web service that analyzes and highlights common risks across flights and various aircraft*

- Communicated with the **Federal Aviation Administration** and other shareholders to establish project requirements and definitions
- Analyzed and removed over **4,000** lines of repetitive flight maintenance logs with irregular patterns using **Python**
- Parsed & optimized the storage of over **600,000** obstacles within **MySQL** database by **50%** during the initiation of flight service
- Dynamically load & estimate obstacle collision risk based on aircraft types and improved **Maven** runtime by **20%**
- Navigate & debug a large complex **dockerized** codebase through **modular testing** and architecture analysis
- Utilized **Liquibase** to maintain a trackable log of **SQL** edits and avoided destructive changes during system integrations

Online Research Programmer - Midwood High School at Brooklyn College

Apr. 2022 – Apr. 2023

Worked with high school students in sprints to create interactive web-apps and experiments for science projects

- Utilized the **JATOS** framework to provide easy UI access to project data and modifications for non-technical administrators
- Secured user connections by deploying on a **proxy configuration** on an **AWS EC2** instance to achieve encryption across networks
- Ported and transitioned multiple in-person projects to remote operations across multiple COVID outbreaks and boosted overall productivity by **50%**

Projects

Pharmaceutical Employee Portal

Aug. 2025 – Jan. 2026

*Develop an enterprise-scale full-stack **React** & **MongoDB** web service to mimic the internal operation management of a medical company*

Masquerade

Jan. 2026 - Jan. 2026

*Worked in a cross-functional team of 4 to design & develop a puzzle game using **C# Unity** in the **Global Game Jam***

Embedded MIDI Music Player

Sep. 2025 – Dec. 2025

*Recreated a fully functioning MIDI music player on an **ARM Cortex Microcontroller** using **C** with extremely accurate tone precision*

Nutrition App

Jan. 2025 – Apr. 2025

*Led a team of 5 to develop a terminal-based **Java** application used to manage daily nutrition intake and workout*

U-Fund Save The Bees Project

Oct. 2024 – Nov. 2024

*Full-stack charity website written in **Java**, **Spring Boot**, and **Angular** with a team of 5 to promote bee preservation*

Library E-Book Service

Oct. 2024 – Nov. 2024

*Multi-library eBook system written in **React** and **Python** to keep track of users and books across locations*

Extracurricular

Secretary - Chinese Conversation Table Club at RIT

Jan. 2026 – Current

Restructure & realignment of club goals to allow for the inclusion of traditional Chinese elements through famous folklores and poems

Student Mentor - Society of Software Engineers at RIT

Aug. 2025 – Dec. 2025

Evaluated student technical levels and provided in-depth dissections of course materials
